my school, if student x is enrolled in class z, then student y is enrolled in class z.

Simple: There exists a pair of students in my school where one student must take atleast those courses the other student takes.

f) $\exists x \exists y \forall z((x \neq y) \wedge (C(x,z) \leftrightarrow C(y,z)))$

From my school, there exists a ~~person x~~ student x and there also exists a student where x and y are not the same person and for all classes z at my school, student x is enrolled in class z if and only if student y is enrolled in class z.

Simple: There exists a pair of students in my school such that both of them are enrolled in the same courses.

7) Let $T(x,y)$ mean that student x likes cuisine y, where the domain for x consists of all students at your school and the domain for y consists of all cuisines. Express each of these statements by a simple English sentence.

a) $\neg T($Abdallah Hussein, Japanese$)$

The student Abdallah Hussein from my school does not like Japanese cuisines.

b) $\exists x\, T(x, \text{Korean}) \wedge \forall x\, T(x, \text{Mexican})$

From my school, there exists a student x s.t. x likes Korean cuisine and for all students x from my school, x lies Mexican cuisine

Simple: Some student from my school likes Korean cuisine and all the students from my school likes Mexican cuisine.

c) $\exists y\,(T(\text{Monique Arsenault}, y) \vee T(\text{Jay Johnson}, y))$

There exists a cuisine y from the set of all cuisines such that The student Monique Arsenault likes y or The student Jay Johnson likes y.
